Full-stack Development

Building the front-end and back-end of a site or app at the same time.

Front-end Development

Creating appealing visible parts of websites that users see and interact within their web browsers.

Back-end Development

Building the "backstage" parts of websites that users don't interact with directly.

UI/UX Design

UI - the appearance and layout.
UX - how something works, allows the best interaction with users.

eCommerce

Custom made eCommerce websites: greater control, flexibility and scalability.
